---

## PROFESSIONAL SUMMARY

D3 fresh graduate in Informatics Management (GPA 3.78/4.0) with 9+ months of production-level full-stack experience across 3 companies. Delivered systems currently used by government institutions and multi-branch F&B enterprises. Specialized in Laravel/React stack with a strong foundation in clean code principles, database architecture, RESTful API design, and CI/CD deployment.

---

## WORK EXPERIENCE

**PT IlmuKomputerCom Braindevs Sistema** – Tebet, South Jakarta | *Fullstack Developer (Intern)* | Dec 2025 – Present

- **SILOG POLRI**
  - Fixed corrupted location data in PostgreSQL and built a Laravel backend to correct it, then displayed the results on a Vue.js map achieving 100% spatial mapping accuracy.
  - Set up automated deployment with GitLab CI/CD so every approved code change goes live to the server without manual steps.
- **KOPDES**
  - Built a Vendor Management module — covering vendor registration, regional mapping, and material allocation — using PostgreSQL backend and React frontend.
  - Built a multi-level task tracker with automatic progress calculation, eliminating 100% of manual calculation errors that previously caused reporting mistakes.
  - Debugged and cleaned messy production data in PostgreSQL — troubleshooted null anomalies, merged duplicate records, and generated accurate status reports, reducing data errors by 90%+.

**PT Inovasi Rekayasa Teknologi** – Padang, West Sumatra | *Fullstack Developer (Freelance)* | Sep 2025 – Dec 2025

- **WELL-NET – Digital Wellbeing**
  - Built secure REST APIs with Laravel Sanctum — implemented token-based authentication and patched session vulnerabilities to protect user data.
  - Designed and stress-tested backend logic for module unlocking and reward features using mock data, delivering production-ready APIs ahead of frontend integration.

**PT Milenial Elite Teknologi** – Bandung, West Java | *Fullstack Developer (Intern)* | Feb 2025 – Jun 2025

- **POS & INVENTORY – Multi-Branch F&B Enterprise**
  - Built and deployed a full POS & Inventory system for an F&B chain using Laravel and MySQL, including an automated COGS recommendation feature with a responsive web interface.
  - Designed the database schema to manage raw materials and semi-finished goods across multiple branches, reducing inventory discrepancies between locations.

---

## EDUCATION

**Politeknik Negeri Padang** – Padang, West Sumatra

*Associate Degree (D3) in Informatics Management* | GPA: **3.78 / 4.0** | 2022 – 2025

---

## TECHNICAL SKILLS

**Languages & Frameworks:** PHP, Laravel, JavaScript, Vue.js, React.js, Inertia.js, Axios, TanStack Query, tRPC, Tailwind CSS

**Database:** PostgreSQL, MySQL — schema design, ETL pipelines, query optimization

**DevOps & Tools:** Docker, GitLab CI/CD, Git — automated deployment, version control

**Core Competencies:** RESTful API architecture, relational database design, unit & integration testing, technical documentation, clean code principles, Agile team collaboration
